

Please fly neighborly and avoid overflight of all homes, buildings and livestock. Do not fly multiple approaches. Use other airports for landing practice.

RUNWAY 24: Fly a modified straight-in approach or a tight left-hand traffic pattern at 1,000' AGL. If unable to fly your downwind inside the house located within the RED CIRCLE, go wide to avoid it. If flying wide, be sure to avoid other houses in the area. DO NOT FLY A RIGHT BASE TO RUNWAY 24.

RUNWAY 06: Fly a straight-in or a wide modified pattern with a short final approach to avoid the circled areas. Do not make an early left turn on departure that takes you near the home in the yellow circle at the top of the diagram. When departing, turn right 15 degrees and climb to 1,000' AGL before turning left.

Ensure your departure climbout does not overfly noise-sensitive areas at low altitude and high power settings.
